Education

New Jersey Institute of Technology — Newark, NJ
Bachelor of Science in Computer Science — *Expected June 2027*

- **Relevant Coursework**: Data Structures and Algorithms, Foundations of Computer Science, Programming Language Concepts, Intensive Programming in Linux, Principles of Operating Systems, Cybersecurity, Networking

Experience

Fiserv — May 2026 – August 2026
Software Engineer Intern — *Berkeley Heights, NJ*

- Shipped a log analysis tool using **Python, React.js, and TypeScript** that pinpoints errors across hundreds of banking workstation logs in seconds, used by **30+ engineers** across **4 teams** and cutting triage time by **50%**
- Stored parsed logs in a **SQLite** database and generated **AI analysis** for each log file that flags failure-inducing errors and generates likely causes and next steps
- Engineered a one-click desktop launcher using **C# and .NET** that handles startup, environment setup, and a **FastAPI** dashboard
- Built a **RAG** chatbot using the **OpenAI API** that retrieves parsed logs from **SQLite** to answer natural-language queries, built to the company's AI Guidelines
- Built a two-stage PII pipeline using **regex detection and HMAC-SHA256 tokenization**, ensuring account data is tokenized before reaching storage or the LLM

NJIT — September 2025 – Present
Information Services and Technology Desk Attendant — *Newark, NJ*

- Lead a team of **8 student workers**, training new hires, managing shift coverage, and handling escalated issues
- Resolve **70+ tickets weekly** in **ServiceNow** across account access, software, hardware, and network issues for students, faculty, and staff
- Protect university accounts by verifying identities and managing access and MFA using **SailPoint and Duo**
- Publish and update **knowledge base articles** for recurring issues, helping the desk resolve common tickets faster

PSEG — May 2025 – August 2025
Nuclear Information Technology Intern — *Salem, NJ*

- Optimized asset tracking by utilizing a **DBMS** to generate and analyze weekly reports on **500+** company hardware assets, improving visibility for leadership
- Introduced a 3D scanning program called **Leica TruView** that let nuclear maintenance supervisors access the plant virtually, reducing inspection time by **30%**
- Resolved a month-long software roadblock within **72 hours** by creating unique troubleshooting protocol documentation uploaded to the company knowledge database
- Delivered real-time technical support for **200+** employees through **ServiceNow**, along with establishing the nuclear plant's first technical support desk
- Performed secure remote installs and troubleshooting using **CyberArk** privileged access management

Projects

Credit Card Fraud Detection | *Python, Pandas* — GitHub

- Built machine learning models to detect fraud across **284,807 credit card transactions** with a **0.17% fraud rate**
- Achieved a **96.3% ROC-AUC** and **81.6% fraud detection rate** using a **Random Forest** classifier while maintaining **94% precision** to minimize false positives
- Developed an end-to-end ML pipeline covering data preprocessing, model training, evaluation, and visualization using **Python and Pandas**
- Applied ML to a real-world **imbalanced classification** problem in fintech

Skills

Programming Languages: Python, Java, TypeScript, JavaScript, SQL, C#
Frameworks & Web: .NET, React.js, React Native, Next.js, Tailwind CSS, HTML, CSS
Backend & APIs: Node.js, FastAPI, REST APIs
Databases & Infrastructure: SQLite, PostgreSQL, Redis
